

HOW TO MAKE YOUR STAR-FINDER

- Stick your thumbs and first two fingers into the four pockets on the bottom of the Star Finder (numbered 1 to 4 in Chinese).
- Ask another person to choose one of the top four squares. Then, depending on the number chosen, open and close the Star Finder that many times (open up and down, close, open side to side, close, etc). For example, if your partner chooses number 2, open and close the Star Finder twice.
- Ask your partner to look inside the Star Finder and pick one of the visible constellations. This time, open and close the Star Finder once for each letter to spell out his choice. For example, if he chooses "root," you should open and close the Star Finder 4 times, once for each letter: R - O - O - T.
- Finally, ask your partner to pick one of the visible constellations again. Open the panel to see the appearance of the constellation they have chosen. Each constellation has an animal and a day of the month associated with it. According to Chinese astrology, when the moon passes through this constellation on the day listed, there are certain things which you should or should not do. What are they?
